OUR
SERVICES

OEM SERVICES

In addition to our core-line glassware, we offer turn-key solutions for all premium handmade glassware production from initial designs to decoration and packaging.

OUR SERVICES

Custom handmade glassware, designed and developed, samples and production.

Fully equipped handmade glass factory for your custom products and reliable delivery.

Decoration by etching, cutting, decoration with precious metals (gold, platinum) or painting.

BESPOKE HANDCRAFTED STEMWARE SPECIFICS

100% hand-made – crystal clear,
brilliant shine

Ecological – Lead-free crystal of
the highest quality, EU certificates

Titanium crystal glass – even
tougher glass, abrasion & shatter
resistant

Easy Care – dishwasher safe,
easy clean, durable

MOQ 200 pcs

Fire-polished rim – chip
resistant, diamond cut,
thickness from 0,8 mm

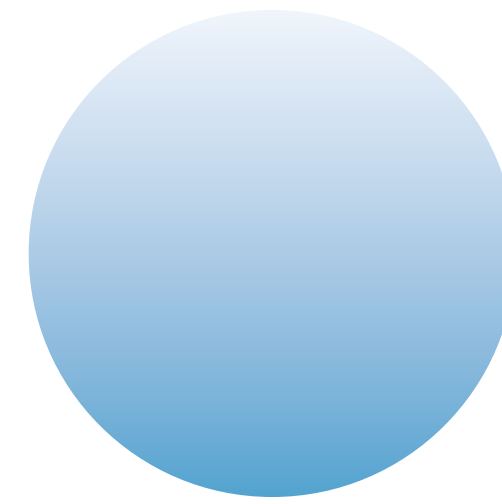

Extra thin, light-weight
experience while
maintaining extreme
flexibility & long durability

Smooth Touch – pulled stem,
no glued pieces, no bulges,
1 piece of solid glass only,
thickness from 4 mm

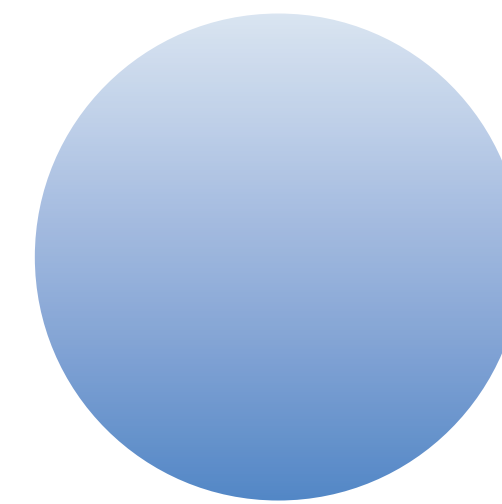

Sandblasted logo
Size 18x18mm – free of charge

OUR COLOUR PALETTE

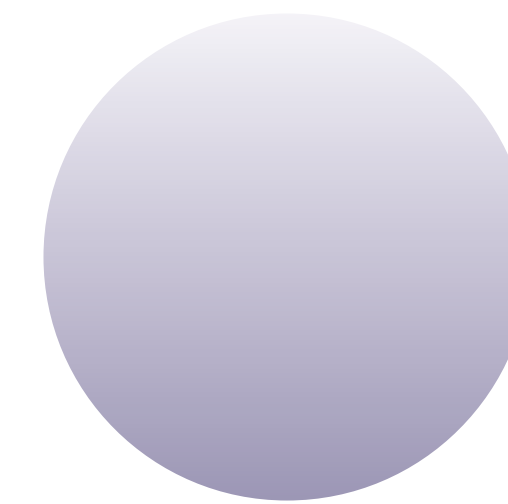

Widest range of coloured
glass across Europe – 16 shades.

SAMPLING PROCESS

Sampling with Kvetna is Easy

1.

Send us your draft, and we will evaluate the production feasibility of your unique piece.

2.

Once the feasibility is approved, you will receive the price for the sampling process as well as an estimated production price for 200 pieces. You can then decide whether to proceed.

3.

If you agree to move forward with the sampling and the payment is credited to our account, the process begins. We will redraw your draft into a production drawing and send it to you for review and approval.

4.

Once the drawing is approved, our master carpenter will create your unique wooden mold, and the hand-blown sampling process will begin.

5.

Two to three unique reference pieces will be created for you. Once the transportation cost is paid, your custom hand-made products will be delivered right to your doorstep.

DECORATION POSSIBILITIES

ETCHING – PANTO

This technique uses the principle of etching of glass, which is not protected by wax. A product is first immersed into wax, into which a pattern is engraved after cooling down, using panto or guilloche machines.

The actual etching follows, which produces a delicate pattern on the glass surface. Etching is often combined with painting. It is also used for various companies, sport or other individual decorations.

ENGRAVING

Dia-Engraving is an engraving technique, which utilizes computer-controlled machinery, and which allows decorating of individual pieces, as well as large series.

HAND-PAINTING

Special preparations are used for painting of glass, such as matt or glossy gold, platinum, colored lustres, enamel or colors.

It is used for painting of rims, painting-over etched patterns and painting of decorations.

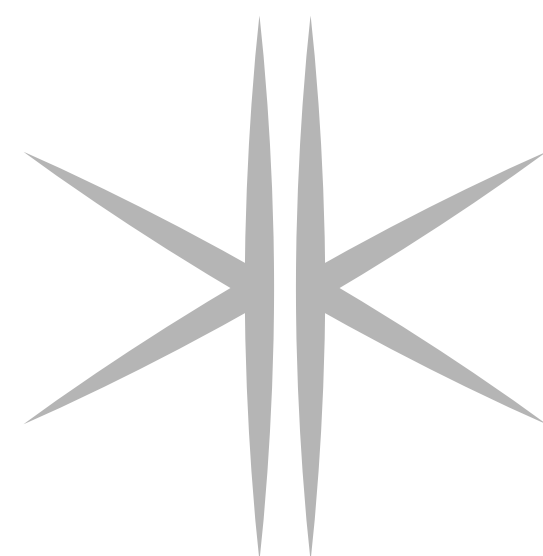

MANUAL CUTTING

Cutting of decorations is performed exclusively manually. Decorations are carried out by polished, as well as matt grindstone.
